

## Beginning C++ Programming Sequence Containers - Vector

In the `test6()` function. The statement on line 152 should read:

```
it = vec.erase(it);
```

Since the `vec.erase` invalidates the iterator, we must assign the returned iterator to continue.

Thanks to Toprak for pointing that out.

---

The slide at approx. 3:59 has a typo in the last statement. The correct line should use 2 parentheses rather than a parenthesis and a curly. The correct line should read:

```
vec.emplace_back("Larry", 18);
```

Thanks to Kriti for pointing that out.
