Beginning C++ Programming

Custom Deleters

In the slide that begins at about 2:05 in this video, the template parameter should be Test not Some_Class.

The code should be:

```
void my_deleter(Test *ptr) {
   cout << "In my custom deleter" << endl;
   delete ptr;
}

shared_ptr<Test> ptr {new Test{}, my_deleter };
```

Thanks to Murali for pointing that out.

Best regards,
Frank Mitropoulos
