Beginning C++ Programming

Constructors and Destructors

In the slide at around 3:30 in this video, the second bullet states,

"However, the base class constructors, destructors, and overloaded assignment operators can invoke the base-class versions"

Is should read,

"However, the **DERIVED** class constructors, destructors, and overloaded assignment operators can invoke the base-class versions "

Thanks to Leo for pointing that out.

Best regards,
Frank Mitropoulos
